VENOME STIMULATE PEPTIDES COMPLEX

ADVANCED PEPTIDE COCKTAIL

VENOME STIMULATE PEPTIDES COMPLEX

Venome Peptides Complex is a revitalizing product with an advanced formula containing **four peptides** which directly help **inhibit** the transmission of electrical **impulses** to the muscles by neurotransmitters. They **suppress muscular contractions** and thus smooth out fine lines, which are the result of repeated use of facial muscles.

The complex additionally **stimulates fibroblasts** to produce new protein fibers, such as collagen and elastin, which help the skin stay firm and plump.

The product also contains a marine microalgae extract and hyaluronic acid — this combination **moisturizes and revitalizes** skin. Ascorbic acid significantly reduces the amount of oxygen free radicals, slowing down their degenerating impact on protein fibers.

INDICATIONS

Forehead expression wrinkles (glabellar lines)

Crow's feet

Nasolabial folds

Vertical lip lines

Chin area

Skin revitalization

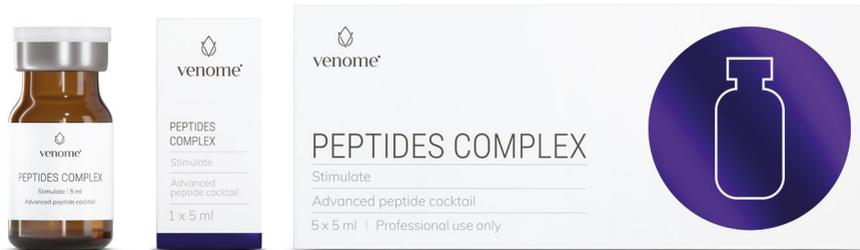

INTENDED USE

Ingredients contained in the product suppress **acetylcholine** release, which significantly weakens muscle contractions in vivo, preventing the formation of expression lines and wrinkles. Additionally, they boost collagen and elastin synthesis and limit the formation of **advanced glycation** end products (AGEs), thus making the skin look radiant and youthful.

HOW ARE EXPRESSION LINES FORMED?

Every day, facial **muscles** make around **15 thousand** movements which are **triggered** by nerve **impulses** sent by the **brain** to the target **muscles**. When nerve impulse passing along afferent fibers reach a myoneural (neuromuscular) **junction**, intense **acetylcholine** release is observed. Acetylcholine is a **neurotransmitter** that distributes the signal across the whole muscle to activate it, resulting with its full **contraction**. The repetition of this pattern causes constant compression and decompression of the skin, which results with the formation of **new expression lines** and the **progression** of existing ones.

HOW DO PEPTIDES INHIBIT MUSCLE CONTRACTION?

Biomimetic peptides contained in the product, called **Argireline** (hexapeptide-8), **SNAP-8** (octapeptide-3), and **pentapeptide-18**, act as **neurotransmitter inhibitors** and help **reduce** the production and release of acetylcholine responsible for the distribution of nerve impulses in muscles. As a result, the fibers do not receive the **signal** to contract, and remain in the **relaxation** phase. This carefully designed peptide cocktail has the ability to affect neuromuscular synapses, **relieving the tension** in the muscles and thus creating a state of **dermal relaxation**, so that fine lines and wrinkles are smoothed out.

Apart from its ability to **inhibit** expression muscle **contractions**, octapeptide-3 (SNAP-8) strongly **absorbs** water, thus moisturizing the skin and ensuring it stays firm and glowing.

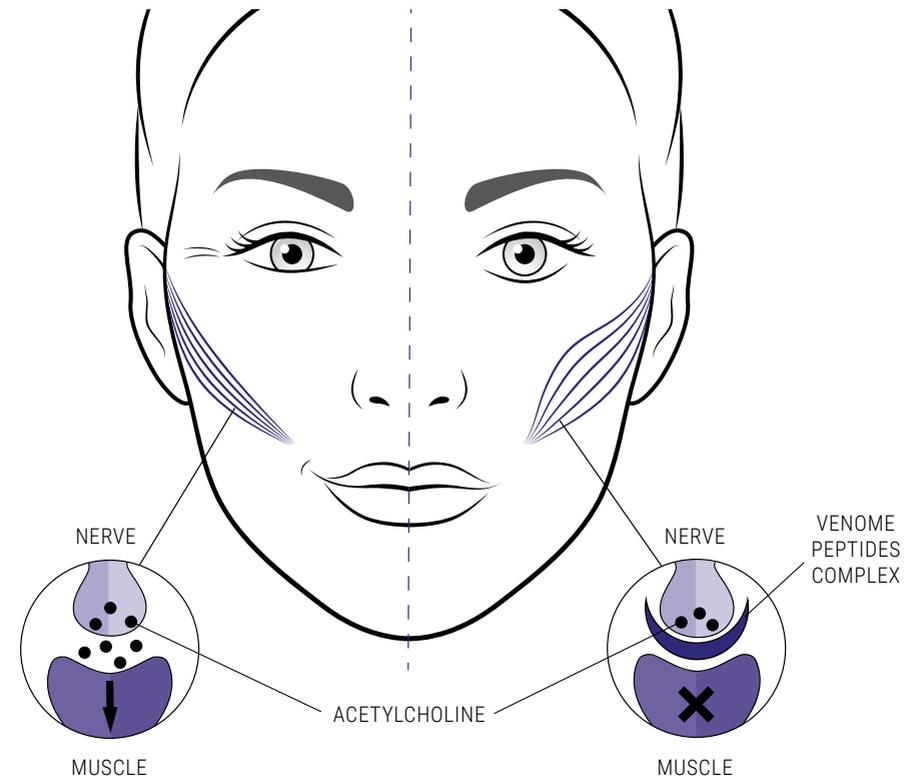

The high decapeptide-3 content **stimulates** skin restoration processes and affects **fibroblast activity**, stimulating cell division and increasing the number of scleroproteins (collagen and elastin fibers). This results in **firmer** and **stronger** skin and the **suppression** of elastosis.

The **nucleotide-rich** marine algae extract affects cellular metabolism, accelerating division processes occurring in the skin, **increasing** skin resilience and strengthening the epidermal protective barrier. Algae combined with hyaluronic and ascorbic acids effectively moisturize the skin and **reduce** the amount of free radicals which damage protein fibers.

Venome Peptides Complex combines the synergistic effects of **four** expression muscle-relaxing **peptides** with ingredients that stimulate cellular division and tissue regeneration, which means it can prevent new expression lines and quickly smooth out the existing ones. The ingredients of the product stimulate **collagenogenesis** for denser and firmer skin.

FACIAL MUSCLE SPASM

FACIAL MUSCLE RELAXATION

AS PART OF THE VENOME STIMULATE SERIES, ALSO TRY:

VENOME STIMULATE BOOSTER HA 6%

DEEP HYDRATION

5 ml

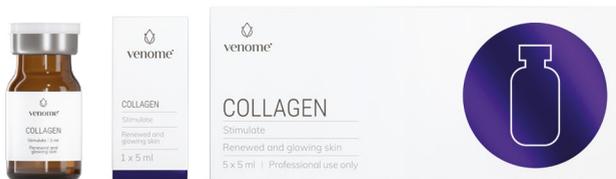

EFFECT

Venome BOOSTER HA 6% is a product with strong hygroscopic properties, making it one of the most effective mesococktail moisturizing the skin and preventing excessive water loss from its surface.

VENOME STIMULATE COLLAGEN

RENEWAL AND GLOW

5 ml

EFFECT

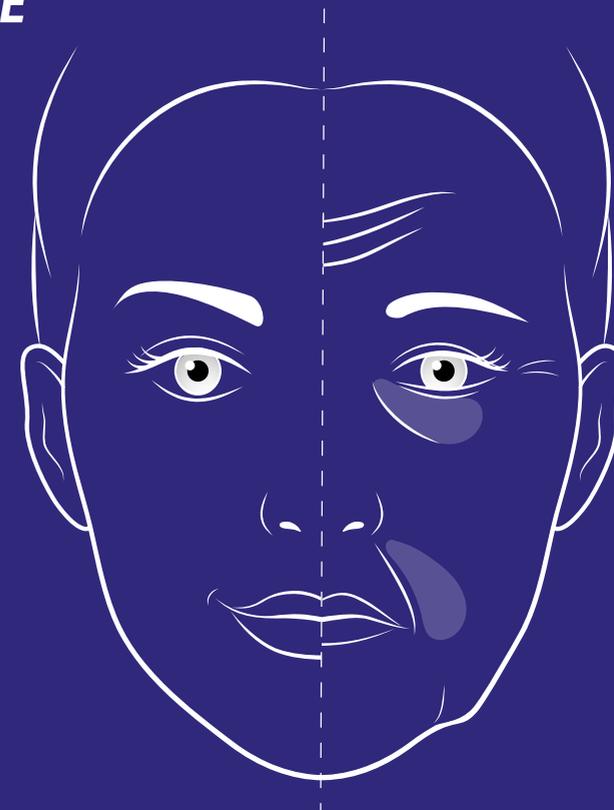

The preparation helps to slow down the aging processes, enables deep hydration, restoring the skin's healthy glow.
