VENOME LIPO SLIM

HELP IN TACKLING STUBBORN FAT DEPOSITS

VENOME LIPO SLIM

Venome Lipo Slim is a two-ingredient product that provides a synergistic combination of two lipolysis activators: **phosphatidylcholine** and **deoxycholic acid**. The product contains active ingredients in high concentrations, making it one of the most effective **lipolytic treatments** for combating stubborn excessive fat deposits.

PHOSPHATIDYLCHOLINE
+
DEOXYCHOLIC ACID

=

PERFECTLY
SCULPTED
BODY

It is **highly stable**, so it can remain active longer and eliminate local fat tissue more effectively.

Phosphatidylcholine is a phospholipid naturally found in the human body. When applied directly into the adipose tissue, it activates receptors responsible for glucose and lipid metabolism to break down lipids into smaller particles, which are then transported to the liver and ultimately removed from the body.

Deoxycholic acid, also known as cholanoic acid, breaks down cell membranes in adipocytes, thus eliminating fat deposits.

The combination of these two ingredients is one of the best tools for targeted **body contouring**.

INDICATIONS

Local fat deposits on the body

Double chin

Compact and edematous cellulite

DIRECTIONS FOR USE

Maximum 15 mL of product per one treatment area, every 14 days in 4–6 sessions.
